Re: Surge Electronic Media
Disaster Recovery Recommendation

To Whom It May Concern,

As I have been in the disaster restoration business for over 42 years, I am certainly familiar with the harmful effects of disasters. Although I am usually involved in restoring physical damage caused by fires, floods or severe weather, I'm also very aware of the effect of disasters on critical business data. Most of us unfortunately do not realize the impact and cost of this type of loss until its too late.

Recently our office server, which is located inside of our office, crashed due to power anomaly. The good news is that we had Surge Disaster Recovery in place. This allowed us to get back to work in less than two hours. Everyone was able to log in to the remote off site server from their office desktop and lap top computers. The transition was smooth and easy. All of our data was accessible, and what could have been an extremely costly and stressful situation turned out to be nothing more than a bump in the road.

We all know the high cost of having our employees unable to work for hours or days, as the result of a disaster. This type of situation would be devastating to most businesses. Based upon my own experience, I strongly advise you not to wait until it is too late.

The bottom line: Surge Disaster Recovery works. Not only does Surge Electronic Media keep our computer network running smoothly, but I also have the peace of mind that my data is safely backed up at all times. I know of no better way to protect your company's data. Take my advice and prevent a business disaster before it occurs. I highly recommend Surge Disaster Recovery.

Sincerely,

Robert Strongwater
